

# QRZ Upload Utility

One of the area people seem to struggle with in regard to WSJT-X and QRZ Logging is the upload process. They have a hard time figuring out how to upload only the new contact and often end up just resending their entire wsjtx adi log. This little utility will solve that problem.

What the utility does is it reads your *wsjtx\_log.adi* file and extracts out the new contacts since your last upload and copies them into a file called *Upload2QRZ.adi* and put it in your document folder. Then when you go to your QRZ log you upload the *Upload2QRZ.adi* to QRZ.

## *Installation:*

1. Unzip the file you downloaded and copy *Upload2QRZ.exe* to your computer. I would recommend copying it to your desktop so you don't have to search for it when you want to run it.
2. Run the program.
3. That will create a file in your documents folder called *Upload2QRZ.adi*. Because this is the first time you have ever run it *Upload2QRZ.adi* will be a copy of your entire *wsjtx\_log.adi* file.
4. Upload *Upload2QRZ.adi* to QRZ.

*Using the Program:* Whenever you want to upload your new contact made using wsjt-x run the upload utility and then upload Upload2QRZ.adi to QRZ. ALWAYS upload Upload2QRZ.adi to QRZ, NEVER run the program more than once without uploading.
